

“The technical solution to the axle nightmare”

Thru-axle innovation – Swiss-made

Thru-axles are now standard on high-quality bikes and e-bikes. However, if you need a thru-axle with adaptors for trailers or other axle accessories, it can be difficult to find the right one amidst the vast array of thru-axle lengths and thread sizes.

With Tutto-in-Uno, FollowMe – known for parent-child tandem couplings – is now launching a universal quick-release axle concept onto the market. Instead of bolting the axle to the frame, the wheel is clamped in place using a two-piece axle. This means you are not restricted by thread type or hub width.

The Tutto-in-Uno quick-release axles are aimed at cyclists who want to attach accessories such as luggage racks, kickstands, but primarily trailers to their quick-release axle, without getting frustrated searching for the right one and being overwhelmed by the vast range of different axles, systems and suppliers.

Thru-axles are available for almost all common trailer types; single-wheel trailers, drawbar trailers, dog trailers or transport trailers.

Tutto-in-Uno „PARK“ – includes an integrated parking stand

Tutto-in-Uno also provides a solution to another common frustration for trailer users: the lack of a bike stand, which is indispensable, particularly when loading and unloading with children. Tutto-in-Uno offers the trailer adapters in an upgraded version that includes an integrated parking stand.

All products are made from anodised hard aluminium and are manufactured entirely in Switzerland. They have successfully passed various tests at “Zedler.de – Institut für Fahrradtechnik und -Sicherheit GmbH”. Distribution is handled directly, and sales through specialist retailers are also planned.
